Launch

Doug Aaberg previewed this new Carlson Software Learning Management System (LMS) at our workshops last year and Carlson has finally released it! And, the best part is that Carlson Academy will be available right from the Help menu in Carlson 2020 programs and is free for up-to-date users.

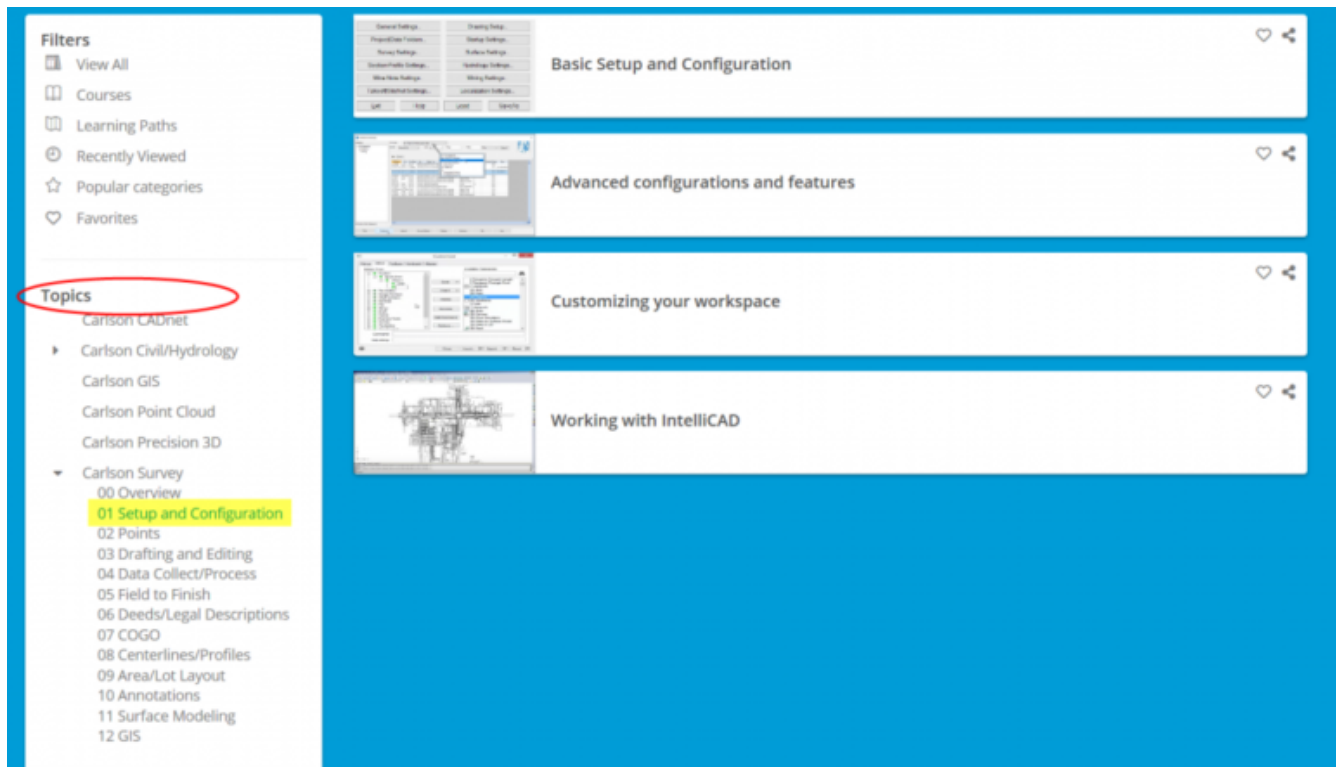

That CAD Girl

Carlson Academy is a collection of modules and training courses for most of the Carlson desktop software programs. The lessons include both written and video tutorials covering features of the software and also many command-specific tips and tricks.

Doug provides a great [introduction to Carlson Academy here](#) and the rest of [his blog](#) is fantastic as well!

The screenshot displays the Carlson Academy website interface. At the top, there is a navigation bar with the Carlson Academy logo and links for Home, Course Library, and Achievements. Below the navigation bar, the page title is 'Basic Setup and Configuration'. The main content area features a grid of settings categories on the left, including General Settings, Project Data Folders, Survey Settings, Backend Profile Settings, Misc Note Settings, Takeoff/Sheet Settings, Drawing Setup, Startup Settings, Surface Settings, Hydration Settings, Mixing Settings, and Localization Settings. A 'Continue this course' button is visible. To the right, there is a progress indicator showing '0%'. Below the main content, there is a list of modules: 'Launching Carlson and exploring the menus', 'Configuring Carlson', 'Project Management', and 'Symbol Library'. A callout box points to the first module, stating: 'This video demonstrates the initial launch of Carlson software followed by a brief overview of the menu structure. Runtime: 2:18'. Another callout box points to the course title, stating: 'Description of course'. The URL at the bottom of the page is 'https://carlsonsw.iltmos.com/course/1592060/module/4120283/open?moduletype=4&assigned=True&LPid=0'.
