On My Soapbox again! If You're Not Using LandXML – You Should Be (yes, all of you!)

February 6, 2020

[Missed our live webinar? Follow this link to view the recording](#)

[LandXML](#) is one of those “universal” topics that applies to everyone, regardless of what software you use and whether your primary business is survey, design, engineering or construction.

[You can register here for a FREE webinar](#) during which I'll

That CAD Girl

explain the benefits of, and how to use, LandXML-formatted files to share and archive project-related data files.

With the retirement of Windows 7, more and more of us are making the move to Windows 10 and that often brings a lot of headaches trying to make sure that we are not only viable and productive going forward, but are also able to view and access project data from years past. **LandXML** can be a lifesaver! Regardless of the program you *currently use*, the one you *plan to use* or the one *other project team members use* – LandXML is the best option for sharing and archiving project data; better yet, it is a tool that's most likely in your hands now and won't require any additional purchase!

This webinar is a MUST SEE for anyone still using Land Desktop, Eagle Point, TerraModel or other program that has been retired because it is increasingly difficult, if not impossible, to install these programs on newer computers. The information provided will apply equally to users of Carlson Software, Land Desktop, Civil 3d, TerraModel, Eagle Point and practically any other software for surveyors, engineers or contractors (including machine control systems).

No purchase is necessary, you can register [here](#).
