# Is Carlson Field to Finish the same as Land Desktop or Civil 3d Description Keys?

July 30, 2016
Similar, but not the same.

Land Desktop and Civil 3D Description Keys are used to sort inserted points onto layers, insert symbols and do various other point-related tasks based on a point's raw description. There are separate routines in the programs for creating automatic linework that connects points using additional field-coding.

Carlson combines all of that functionality into the Field to Finish routine. Whether you need to sort points to layers, insert symbols or create automatic linework based on field-coding, Field to Finish manages it all.
