Features and Benefits of CADNet 2017

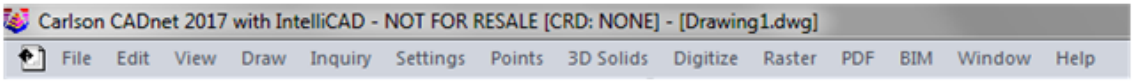

Carlson CADnet, introduced in 2014, allows users to import faster images and PDF files and, if needed, even to merge multiple images into one file that can be digitized or otherwise converted by CAD software using a variety of raster-to-vector routines. CADNet also gives you many tools to help clean up text and linework generated from raster images.

Recent updates to **CADNet** gives you the ability to export drawing entities to 3D PDF files, import Sketchup files and import and export BIM models (doors, windows, walls, roofs, etc.) and bring them into CAD as CAD software entities; plus, **CADnet** includes a routine to export surfaces into BIM.

Menus in CADNet 2017
